

"Information Harvesting"

October 23, 2014

EverySense and Nippon Antenna Agree to Joint Development of "EveryStamp", Small, General-Purpose Environmental Sensors for Era of IoT and Big Data

EverySense, Inc. (California, USA, CEO: Hiroshi Mano) today announced the signing of a contract with Nippon Antenna Co., Ltd. (President and Representative Director: Yutaka Takizawa), comprehensive antenna manufacturer, for the joint development of the "EveryStamp," small, general-purpose sensors and modules for measuring a wide range of environmental parameters.

"EveryStamp" is a small, general-purpose, and networked environmental sensor that can be used for the quick and simple collection of information via the internet from various environments in which we live.

Through this joint development with Nippon Antenna, EverySense will create general-purpose and highly diverse module designs with an open interface that it is confident to provide a boost to progress on study, research, and the development of new business opportunities for the internet of things (IoT). Supplying of the new products are planned to commence in the first half of 2015.

Through this development, EverySense will be able to offer new solutions for active data capture by covering new ground as it works toward mass production in sensor field.

EverySense Inc.

EverySense, Inc. undertakes R&D in fields where future growth is anticipated, including the internet of everything (IoE), internet of things (IoT), machine-to-machine communications (M2M), and sensor networks, extending from the associated basic research through to the research and development of applied technologies with potential for use in the provision of new services. If data produced by a wide variety of sensors all over the world can be utilized to help solve the problems faced by society and in our own lives, it will create a richer society that is safer and more secure. EverySense stages idea-a-thon and hackathon events to research and develop new business models for the IoE.

Nippon Antenna Co., Ltd.

A supplier of a wide range of antennas such as those used for terrestrial digital broadcasts, and also of electronic video equipment and telecommunications installation work. With comprehensive capabilities underpinned by extensive experience in broadcasting and communications for many years, and also with deep know-how and advanced technology, Nippon Antenna brings an energetic approach to realizing the progress of future generation of telecommunications society.
